#### **Market Commentary**

Oil prices plummeted early Wednesday with Brent falling below \$40 USD a barrel being dragged down by estimates of a surge in US inventories and the increase of COVID cases in Europe and USA

The Bureau of Land Management approved a ConocoPhillips led oil exploration project in Alaska which was projected to yield approximately 160,000 barrels of crude daily when it becomes operational. "The project is an important job creator for families in Alaska, with more than 1,000 jobs expected during peak construction and more than 400 jobs during operations, creating more revenue for the State, and offering protections for important resource values such as caribou and subsistence activities," said the head of BLM Alaska, Chad Padgett. In China, a colossal refinery and petrochemical complex with a capacity of 400,000 barrels per day was given the green light. The "Yulong Project" was one of approximately 50 industrial projects whose construction has started in the province of Shandong over the past week. According to Argus, the first phase of the complex, the 400,000-bpd refinery, is expected to be completed by 2025. The units in the first phase are designed to process crude oil from the Middle East

In Russia, crude oil exports dropped 7.9% year over year. While Russia was part of the OPEC + agreement to curtail supply to the market, exports also dropped due to the slump in oil prices. OPEC+ is set to ease the current cuts by 2 million barrels per day (bpd) as of January, but weak demand and rising supply from exempt OPEC member Libya could derail those plans
